

CHELATED FOLIAR NUTRITION · MAGNESIUM, MANGANESE, IRON AND SULFUR

FotoMax

A greener leaf, more energy for the crop.

REFERENCE RATE

0.5–1 L/ha

☒ Nationally manufactured

☒ Amino-acid chelated

☒ By growth stage

What it is

An organomineral foliar fertilizer of magnesium, manganese, iron and sulfur, chelated with amino acids. The engine of photosynthesis during active growth.

Why it works

More chlorophyll

Magnesium sits at the center of the chlorophyll molecule: more chlorophyll, a greener leaf.

More photosynthesis

Better use of every day of sunlight during active growth.

Corrects yellowing

Corrects yellowing caused by magnesium and iron deficiency.

Fast uptake

Amino-acid chelated: the plant takes it up fast and uses almost all of it.

What to expect

Every figure states its evidence level

2,700 → 5,200 kg/ha

Five soybean seasons under sustained regenerative management

FIELD OBSERVATION

Where and how to apply

SYSTEM	RATE	APPLICATION METHOD
Foliar	0.5-1 L/ha	Vegetative stage and active growth: V6-V8 in soybeans

Applied with the pass that matches the growth stage. Shake before opening.

The case behind every figure

Sector, region and scale; never the grower's name

FIELD OBSERVATION Soybeans, Campo 9 area: five seasons of gains

Sustained regenerative management with the stage-by-stage foliar program: 2,700 kg/ha in the drought year, then 4,000, 4,200, 4,700 and 5,200 kg/ha.

Technical data

Base	Magnesium, manganese, iron and sulfur chelate
Format	Liquid
Stage	Vegetative and active growth
Storage	Shaded; shake before opening
Origin	Made in Paraguay
Crops	Row crops and horticulture

Works with

Shield
The stage before: structure at V3 to V4.

Energy
The stage after: flowering at R1 to R3.

VitaCrop
The biostimulant that rides in the same V6 to V8 pass.

Before you buy, measure your soil
Soil chromatography sets the baseline and the rate. A result from your own field is a better argument than anyone else's case.
